

# Write a love letter to a worm

What would you say to them?

Do you have questions?

Things you'd like to tell them?

Compliments and sweet nothings?

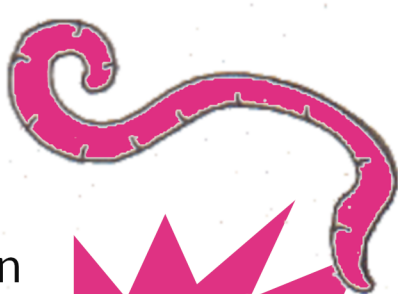

How would you get them to like you?

Bonus points: Now write back from  
the worm's point of view...

Worms are covered in tiny hairs, which help them grip the soil to move

Share your writing with us at the Microbe Disco! You can let us know when you arrive, or if you're keen sign up for a limited number of pre-booked slots, you can email [linden.k.mcmahon@gmail.com](mailto:linden.k.mcmahon@gmail.com) There will be prizes for the best pieces!

Worms are essential to taking care of soil, they aerate it, bring nutrients to the surface, and improve drainage.

When worms mate, they create a slime cocoon which picks up both sperm and eggs - each worm produces both.

Worms breathe through their skin and need to be wet to do this!

Worms use touch to communicate with each other
